Subject: **Disclosure of Material Information - Target of 18MV renewable achieved with the newly installed 5.6 MW Solar Farm**

Ismail Industries Limited is pleased to announce the development of a 5.6 MW Solar Park Project at its Hub facility, integrated with a 10 MWh Battery Energy Storage System (BESS).

The project incorporates Sungrow's advanced liquid-cooled battery energy storage technology, offering round-trip efficiency of up to 92% and designed to support reliable operation under extreme ambient temperatures.

The project also includes an advanced Microgrid Control System to enable coordinated management of solar generation, battery storage and other captive energy sources, ensuring optimised system performance, improved energy efficiency and enhanced operational reliability.

Upon completion, it increases the annual solar electricity generation, bringing the company's total renewable energy capacity to approximately ~18 MW and further reducing reliance on fossil fuels.

The Company plans to further increase its Solar Power generation capacity by another 4MV till June 2027.

The project represents an important step in the Company's decarbonisation journey by expanding renewable energy generation, improving energy management and supporting the transition towards cleaner and more sustainable manufacturing operations.

The Company will continue to keep its shareholders and the Exchange informed of any further material developments.

Regards,

For **Ismail Industries Limited**
