

SG POWER LIMITED

B-40, S.I.T.E, KARACHI, PAKISTAN

Corporate Briefing Session 2024

- SG Power Limited is a Gas based captive power plant incorporated in the year February 10, 1994 and the sole consumer of power is SG Allied Businesses Limited.

- Currently the Company is facing many challenges, the biggest challenge is uncertainty of Gas Supply along with higher Gas Tariff.

- The company signed various revised agreement with SSGC with new tariff, with mix of RLNG and Natural Gas but unfortunately gas supply was only for few hours in the day and in some days up to 8 to 10 hours a day. Gas Tariff in July-2023 was Approx. Rs. 1500/MMBTU which gradually increased to Approx. 3100/MMTB till June-2024.

- We hope that in coming months Government finds a solution and give stable supply to captive power plants at economical rates as currently rates are too high and makes captive power generation uncompetitive.

- The company is considering to install power generation from Wind, Solar, Diesel Hybrid Systems.
- Feasibility study is under way.
